RE: **MEASURING DEVICE NOTICE / SEAA 1120 and 1064**
DISTRIBUTION ACCOUNT NO. 100750 / WATER RIGHT 95-4686

Water User:

On 10 February 2004, the State Engineer initiated the referenced agency actions and sent you a notice of the statutory requirement to install and maintain a functional headgate control and accurate measuring device on the ditch to your pond under the referenced distribution account and water right.

It has subsequently been reported to the State Engineer and verified by his representatives on July 10, 2006, that a headgate has been installed. We understand that due to a level ditch profile a suitable location for a measuring device has not been established. Therefore, at this time we have elected to rate the pipe exit below the headgate for flow amounts at various headgate settings. The appropriate flow rate will be set by the water commissioner, corresponding to your water right flow of 1.33 CFS and any corresponding regulation cuts made when river flows subside.

Please notify the Water Commissioner Becky Taft at (435) 425-3206 if the conditions of your diversion change whereby flow rates will be influenced, requiring a re-rating of the pipe, this should be done at least twice during the irrigation season. We encourage you to maintain your diversion and as the ditch is maintained, we look forward to working with you to determine a suitable location to install a measuring device that will provide more accurate flow rates.

The subject agency actions can be formally concluded. Your efforts to comply with these orders are commended and appreciated. We anticipate that a permanent measuring device will be installed in the near future, as the ditch is maintained.

Sincerely,

Mike Silva
Distribution Engineer
